GOOD
REASONS

INSULATE WITH STEICO WOOD FIBRE

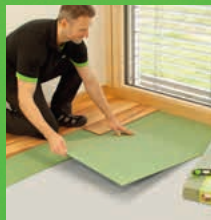

ENGINEERED BY NATURE

Because **STEICO** **INSULATION** **FEELS** **GOOD**

STEICO insulation materials, suitable for roofs, walls, ceilings, and floors, create a comfortable and healthy living environment for both new build and renovation projects.

Reason 1

STEICO INSULATION MATERIALS are crafted from fresh, untreated softwood – with no harmful additives, yet they retain all the beneficial properties of nature.

Reason 2

PROTECTS FROM THE COLD. As certified Passivhaus components STEICO insulations are the ideal solution for energy efficient construction.

Reason 3

PROTECTS AGAINST HEAT. STEICO insulations help to block summer heat, ensuring a comfortable and cool indoor environment during hot weather.

Because
**CLIMATE
PROTECTION**
and
**INDOOR
CLIMATE**
are important

Reason 4

ACTIVE CLIMATE PROTECTION.

In 1 kg of wood fibre insulation, there is 1.2 kg of CO₂. The STEICO insulation for a typical single-family home binds the same amount of CO₂ as a small car releases over a distance of 125,000 miles.

Reason 5

NATURAL WELL-BEING

STEICO wood fibre insulations help to regulate indoor humidity. As they avoid harmful additives they are ideal for allergy sufferers or people with extreme sensitivities.

Reason 6

PROTECTION FROM NOISE

Whether it's the roof, walls, or ceiling, the sound insulation properties of STEICO insulation materials guarantee a peaceful and quiet home environment.

They also excel as impact sound insulation in floor constructions, showcasing the natural qualities of STEICO products.

Reason 7

WEATHER PROTECTION

STEICO insulation materials are water repellent, providing protection even if roof tiles are damaged and exposed to rain.

Reason 8

DIFFUSION OPEN

STEICO insulations are permeable to water vapour. This helps prevent moisture build-up and helps to protect and preserve the building fabric.

Reason 9

FIRE PROTECTION

Wood burns. That's undeniable. However, with STEICO insulating materials there is a benign, slow and controllable reaction to fire. They do not drip and produce significantly less smoke than other insulating materials. Fire protection detailing which achieves up to REI90 are possible with STEICO insulation products.
