# Intelligent Timber Construction

# The STEICO Timber Building System

The STEICO Building system combines innovative timber structures with ecological insulation materials. Its strengths of energy efficiency and economical benefits are particularly relevant in pre-fabrication. Future ready structures can be achieved today as standard.

## I-joists

I-joists are light and energy efficient building components – ideal for low energy and Passivhaus construction.

## Laminated Veneer Lumber (LVL)

LVL (Laminated veneer Lumber) is a high load bearing capacity component for areas of high structural demand in timber construction – available as strips, beams or sheets.

Service Void

STEICO*install* is an innovative solution for the service void. Pre-routed channels allow the easy installation of services.

## Sealing system

Whether vapour control layer or breather membrane, sealing compounds, tapes or accessory materials – STEICO provides a complete system for the building envelope.

## Render carrying boards

The robust, vapour open render boards are available from both wet or dry production and can be used for both render and ventilated facade systems.

## **Flexible and Rigid wood fibre boards**

Ecological, economical and fast – alongside sarking and sheathing flexible wood fibre batts you will also find air injected wood fibre as part of the STEICO range of products.

Interactive layers in PDF document

# Interactive layers in PDF document (PDF levels)

## Functionality of the following pages

Working with layers (levels) is standard practice in CAD programs. This allows drawing objects within those layers to be turned ON or OFF which allows for easier organisation of documents.

- These layers can also be exported into PDF documents which allows easier administration of large files
- The new Detail Configurator from STEICO, tailored to the new pre-fabricated elements system, now offers interactive layers in the PDF document.
- The wall build-ups of the various construction details can be individually chosen with the help of the layer system.

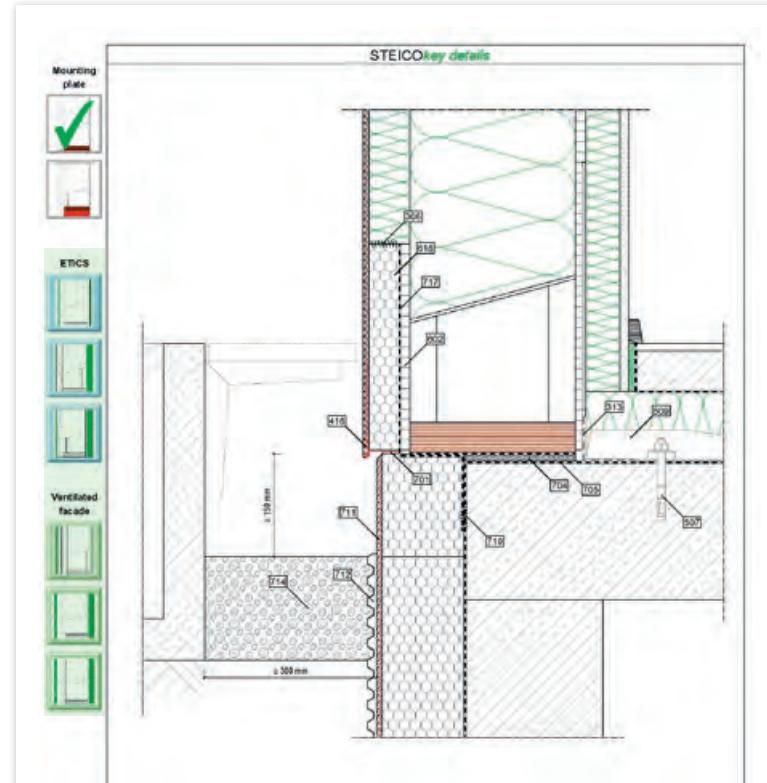

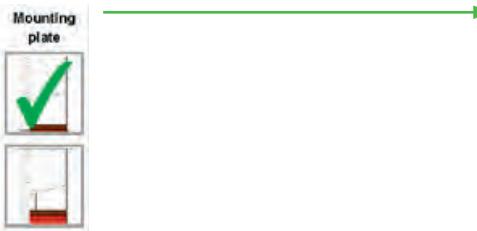

Buttons have been created that link the layers with the corresponding wall build-up. This means that only two clicks are required to select the desired build-up in the respective construction detail

**The switching process has two steps and is possible at any point:**

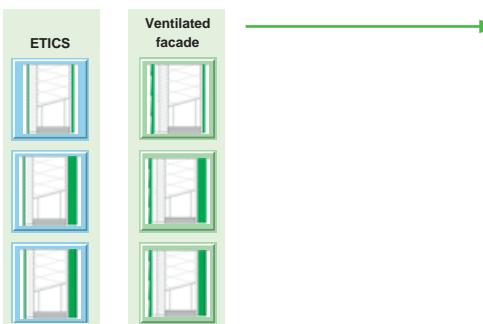

- 1 Choose whether the structure is shown with or without a mounting plate
- 2 Choose which wall build-up is required for the construction detail

The selectable wall build-up can also be changed in the respective detail, via the selectable switches of the twelve variants on the left of the page. By clicking on relevant switch the changes are shown in the drawing. Switching between different wall build-ups is made easy and uncomplicated.

**Step 1** (Choose soleplate detail)

**Step 2** (Choose wall build-up)

## Options for wall build-ups

### The STEICO default wall

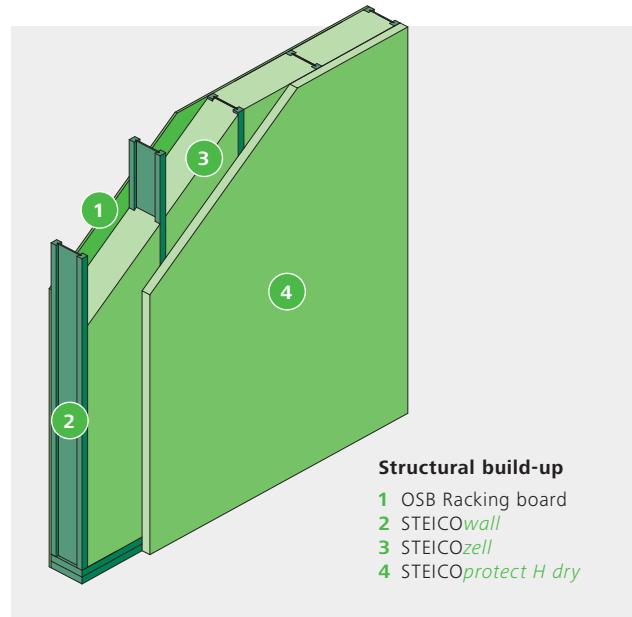

The STEICO default wall is the basis for the interactive layer structure. It is available with or without a mounting plate. Internally an OSB racking board is a fixed part of the wall build-up as is the STEICO*protect H dry* externally.

**There are 2 options for the external finish:**

- ETICS
- Ventilated facade

**There are 3 options for the internal finish:**

- Directly fixed Gypsum fibre board
- STEICO*install* + Gypsum fibre board
- STEICO*install* + Render

**The following gives an overview of the available wall build-ups:**

Outside	ETICS			Ventilated facade		
Inside	Gypsum board	STEICO <i>install</i> + Gypsum board	STEICO <i>install</i> + Render	Gypsum board	STEICO <i>install</i> + Gypsum board	STEICO <i>install</i> + Render
Without mounting plate						
With mounting plate						

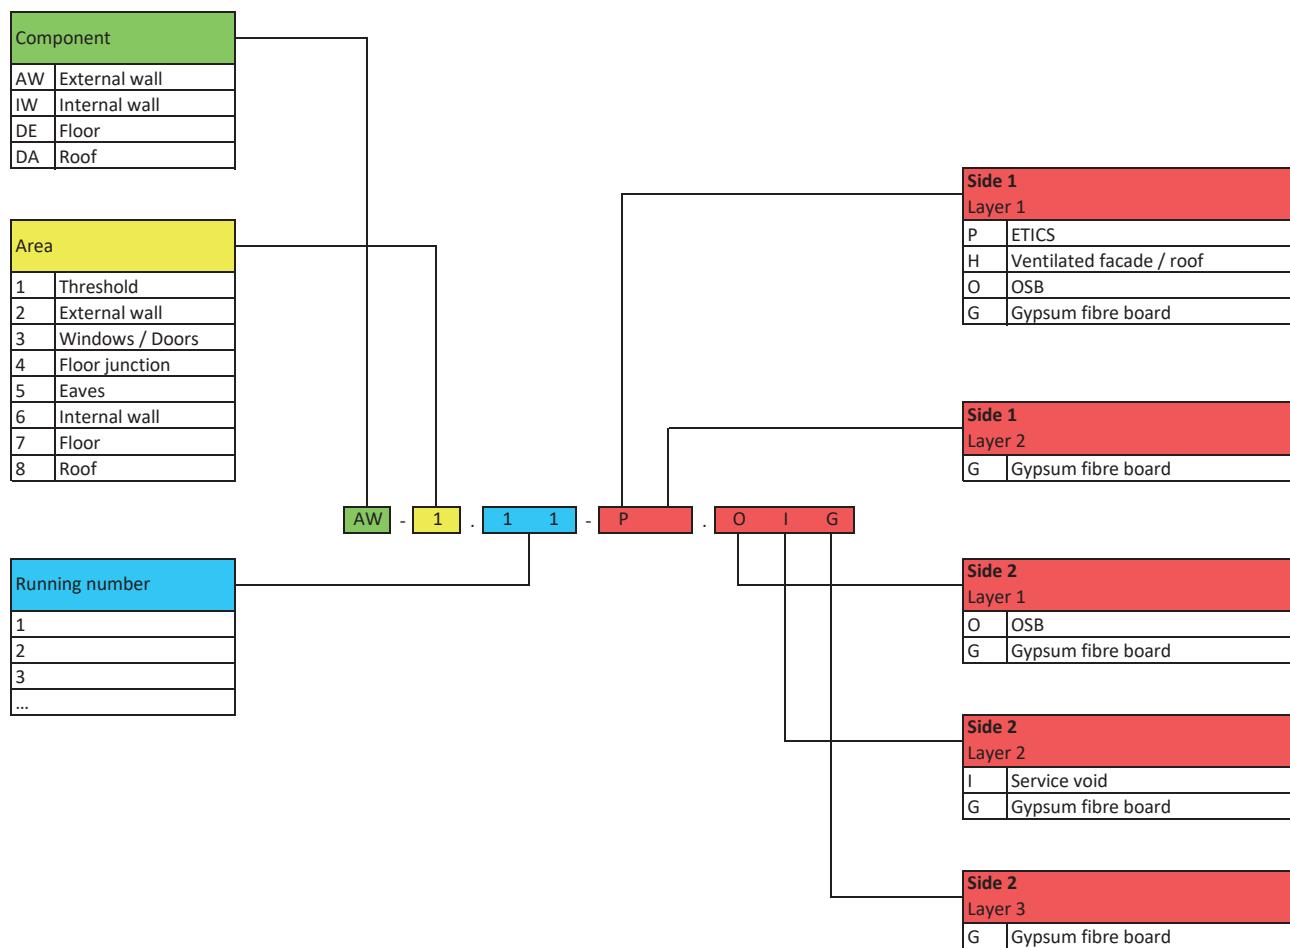

## Explanation of detail names

# Explanation of detail names

## The STEICO Building System Detail Configurator

This STEICO Building System Detail Configurator has been tailored to the manufacture of elements and contains numerous solutions for different locations and structural build-ups. In order to ensure a clear structure the individual Construction Details have been allocated a unique reference. The following shows the method behind the naming logic for each detail:

### Example for the naming logic of the unique reference:

The detailed overview on the following page shows **the Construction Details for the available variants**. You can switch between the available variants using the interactive tabs in the PDF document. **Instructions on page 3**.

We spend approx. 80 % of our lives in enclosed rooms. But are we always aware what we are surrounding ourselves with? STEICO has set itself the target of developing building products which consider the needs of both man and nature. Our products are therefore produced using sustainable natural materials. They help reduce energy use and add considerably to a natural healthy internal climate. STEICO insulation and

construction materials, carry a number of distinguished 'seals of approval' which is a sign of high quality, healthy and functional building products.

The raw materials used in STEICO products are certified by FSC® (Forest Stewardship Council®) and PEFC® (Programme for the Endorsement of Forest Certification®), ensuring a traceable and fully sustainable usage of the raw materials. STEICO, the number 1 choice for your sustainable building solutions.

## Natural insulation and construction systems for new builds and renovations – roof, ceiling, wall and floor

Renewable raw materials without harmful additives

Excellent cold protection in winter

Excellent summer heat protection

Energy saving and increased property worth

Weather tight and breathable

Excellent fire protection

Excellent sound protection

Environmentally friendly and recyclable

Light and easy to handle

Insulation for healthy living

Strong quality control

Compatible insulation and structural building systems

STRUCTURAL TIMBER ASSOCIATION  
Building solutions in timber

ENGINEERED BY NATURE
